## LISTING OF THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the present application. Additions are identified by <u>underlining</u>. Deletions are indicated by <u>strikethrough</u> or [brackets].

- 1. (Canceled)
- 2. (Previously Presented) The method of claim 4, further comprising: updating the database to reflect changes in the event data.
- 3. (Previously Presented) The method of claim 4, wherein the step of establishing the call further comprises:

determining based on the event data a telephone number associated with the user and a telephone number associated with the one or more parties; and

connecting the call between the user and the one or more parties via the telephone network based on the telephone numbers.

4. (Currently amended) A method for connecting a call between a user and one or more parties in a telephone network, the method comprising:

receiving, via a data network, event data associated with the user, the event data comprising information for connecting a call to the one or more parties and a time period for initiating the call;

storing the event data in a database;

determining that a current time is within the time period for initiating the call;
notifying the user by instant message sent via the data network that the call is about to take place;

receiving confirmation from the user <u>via the data network</u> to initiate the call to the one or more parties on behalf of the user; and

establishing the call between the user and the one or more parties via the telephone network based on the event data.

5. (Currently amended) A method for connecting a call between a user and at least one party using an electronic calendar system having a capacity to record, the method comprising:

establishing at least one event record corresponding to the call, the event record comprising user information and at least one telephone identifier;

associating the event record with an event time;

requesting authorization from the user by instant message sent via a data network to initiate the call, based on a current time and the event time; and

initiating the call to the at least one party on behalf of the user, based on an affirmative response to the authorization request from the user, the affirmative response sent by the user over the data network.

## 6. (Canceled)

- 7. (Currently amended) The apparatus of claim 10, wherein the calendar system is configured to update the event data.
- 8. (Previously Presented) The apparatus of claim 10, wherein the transmitter is to determine based on the event data a telephone number for the user and a telephone number for the one or more parties.
- 9. (Original) The apparatus of claim 8, wherein the transmitter is to connect the user and the one or more parties via the telephone network based on the telephone numbers.
- 10. (Currently amended) Apparatus for connecting a caller and one or more parties in a telephone network in a system comprising a data network and the telephone network, the apparatus comprising:

a receiver for receiving via the data network event data associated with the caller,

Page 4 of 9

a calendar system for storing event data comprising information for connecting with the one or more parties and a time period for connecting; and

a transmitter for connecting the caller via the telephone network to the one or more parties based on the event data, wherein the transmitter determines that a current time is within the time period for connecting, notifies the caller by instant message sent via the data network that a connection is about to take place, and receives confirmation from the caller via the data network to initiate the connection to the one or more parties.

## 11. (Canceled)

- 12. (Previously Presented) The system of claim 14, further comprising: means for updating the database to reflect changes in the event data.
- 13. (Previously Presented) The system of claim 14, wherein the telephone network comprises:

means for determining based on the event data a telephone number for the user and a telephone number for the one or more parties; and

means for connecting the user and the one or more parties via the telephone network based on the telephone numbers.

14. (Currently Amended) A system including a data network and a telephone network for connecting a user and one or more parties, the system comprising:

means for running a calendar application for receiving event data from the user via the data network and for storing the event data in a database, wherein the event data comprises information for connecting with the one or more parties and a time period for connecting;

means for determining that a current time is within the time period for connecting; means for notifying the user by instant message sent via the data network that a connection is about to be initiated;

means for receiving confirmation from the user <u>via the data network</u> to initiate the connection to the one or more parties on behalf of the user; and

means for connecting the user and one or more parties based on event data.

Page 5 of 9

15. (Currently Amended) A computer readable medium comprising computer program code eapable of configuring a user device to perform a method for connecting a call between a user and one or more parties in a telephone network, the method comprising:

receiving, via a data network, event data associated with the user, the event data comprising information for connecting a call to the one or more parties and a time period for initiating the call;

storing the event data in a database;

determining that a current time is within the time period for initiating the call;
notifying the user by instant message sent via the data network that the call is about to be initiated;

receiving confirmation from the user <u>via the data network</u> to initiate the call to the one or more parties on behalf of the user; and

establishing the call between the user and the one or more parties via the telephone network based on the event data.

16. (Currently amended) A computer readable medium comprising computer program code eapable of configuring a user device to perform a method for connecting a call between a caller and at least one party using an electronic calendar system having a capacity to record, the method comprising:

establishing at least one event record corresponding to the call, the event record comprising caller information and at least one telephone identifier;

associating the event record with an event time;

requesting authorization by instant message sent via the data network to initiate the call from the caller, based on a current time and the event time; and

initiating the call to the at least one party on behalf of the caller, based on an affirmative response to the authorization request from the caller, the affirmative response sent via the data network.

## 17. (Cancelled)
